Title: RECOMBINANT N-SMASES AND NUCLEIC ACIDS ENCODING SAME

RECEIVED

DEC 04 2002

TO THE ASSISTANT COMMISSIONER FOR PATENTS:

TECH CENTER 1600/2900

Transmitted herewith is:

Declaration Pursuant To 37 CFR 1.132 (Original);
Certificate of Mailing;
Return postcard.

in the above identified application.

- ☒ No additional fee is required.
- ☐ A check in the amount of _____ is attached.
- ☒ The Assistant Commissioner is hereby authorized to charge and credit Deposit Account No. 04-1105 as described below. A duplicate copy of this sheet is enclosed.
- ☐ Charge the amount of _____
- ☒ Credit any overpayment.
- ☒ Charge any additional fee required.

Signature

Dated:

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

APPLICANT: S. Chatterjee
SERIAL NO.: 09/282,879 EXAMINER: M. Rao
FILED: March 31, 1999 GROUP: 1652
FOR: RECOMBINANT N-SMASEs AND NUCLEIC ACIDS ENCODING
SAME

THE HONORABLE COMMISSIONER OF PATENTS AND TRADEMARKS
WASHINGTON, DC 20231

SIR:

DECLARATION PURSUANT TO 37 CFR 1.132

The undersigned declares as follows:

1. I am the inventor of the above-identified application (hereafter the "subject application"). Additionally, I am a Professor of Pediatrics in the Department of Pediatrics at the Johns Hopkins University Medical School in Baltimore, MD.
2. As I understand it, the subject application discloses and claims, among other things, a method of identifying a compound useful in the diagnosis or treatment of a human neutral sphingomyelinase (N-Smase) related disorder. A particular method includes contacting an agent with a recombinant N-Smase and analyzing enzyme activity in the presence and absence of the agent.
3. I have reviewed the Patent Office Action ("Office Action") dated April 9, 2002 issued in connection with the subject application. As I understand the Office Action, the patent Examiner rejected claims 13-17 as being obvious over Chatterjee et al. (*J. Biol. Chem.* (1989) 264: 12554); Ogita et al. (WO 95/18119); and Ausbel et al. (*Current Protocols in Molecular Biology*, J. Wiley & Sons (1987) pp. 10.0.3 -10.06). Hereinafter, the cited references are referred to as "Chatterjee", "Ogita" and "Ausbel",

U.S.S.N. 09/282,879
Page 2

respectively.

4. I am familiar with the contents of Chatterjee and Ausbel and I have read an English language translation of Ogita. As I understand it, Chatterjee reports isolation of naturally-occurring N-Smase from human urine, Ogita (as translated) reports isolation of a bacterial sphingomyelinase inhibitor from grass, and Ausbel discloses standard cloning methods.

5. I must respectfully disagree with the patent Examiner's position that the method I now claim is obvious over Chatterjee, Ogita and Ausbel. More specifically, I must disagree with the suggestion by the Examiner that it would be obvious to make the recombinant N-Smase featured in the claimed method.

6. For example, well before December 1996, I purified the N-Smase enzyme from human urine as described in Chatterjee. However, my attempt to obtain protein sequence information from the purified enzyme was not successful. Specifically, I found that the N-terminus of the N-Smase was blocked in a way that made it impossible to obtain useful protein sequence information using conventional methods.

7. Additionally, and well before December 1996, I contacted researchers at Harvard University (Cambridge, Mass) and asked them to obtain protein sequence information from the purified N-Smase enzyme at my direction. Using standard protein sequencing steps, they too were unable to obtain any useful protein sequence information from the purified enzyme.

8. I concluded that it was not possible to obtain useful protein sequence information from the purified N-Smase enzyme. I also concluded that it would not be possible to make the recombinant N-Smase by using approaches that required

Chatterjee, S. et al.
U.S.S.N. 09/282,879
Page 3

peptide sequence information to make cloning probes.

9. I successfully made the recombinant N-Smase by using a protein expression cloning method.

10. In particular, and well before December 1996, I developed a monospecific antibody that bound the N-Smase enzyme. Preparation and use of that antibody was described in a research article I co-authored (Chatterjee, S. and N. Ghosh (1989) J. Biol. Chem. 21: 12554). The monospecific antibody I developed was not available to the public before December 1996.

11. I used the monospecific antibody to clone and isolate the recombinant human N-Smase featured in the claimed method. Particulars of the expression cloning approach I employed were provided in a research paper (Chatterjee, S et al. (1999) J. Biol. Chem. 24: 37407).

12. The expression cloning approach I used to clone and isolate the recombinant human N-Smase was not taught or suggested by Chatterjee, Ogita and Ausbel as cited by the Examiner.

13. In particular, there is no disclosure or suggestion in any of the cited references that it would be possible to make a monospecific antibody against human N-Smase and that the antibody could be used to clone and isolate the recombinant enzyme.

14. Additionally, there is no disclosure in any of the cited references that it would be impossible to clone and isolate the human N-Smase enzyme using standard protein sequencing techniques to make cloning probes.
